WHO ARE WE?

Who is Genpak?

For nearly 50 years, Genpak has been the premier manufacturer for innovative food packaging solutions. Starting with one plant in New York, we have since grown to 20 state of the art facilities across the United States and Canada. Diversifying with materials, such as polystyrene, polypropylene, PET, paper and fiber, Genpak produces highly functional and extremely versatile products. Genpak is more than just a foam hinged container company. Not only can Genpak products be found at your favorite restaurants and eateries, but take quick look around the perimeter of most grocery stores and you will likely see a Genpak container. Anywhere food is being packaged, you'll find Genpak. We are confident there is a solution waiting to be found. Please check us out online at www.genpak.com or give us a call at 800-626-6695 and one of our packaging professionals will help you out.

Manufacturing Materials.

Foamed Polystyrene – Polystyrene has excellent insulation properties and decent thermal resistance making it applicable for both hot and cold foods. Hot foods will stay hot longer and cold foods will stay cold longer in a foamed PS container. Foamed polystyrene also takes very little energy to produce compared to other substrates and consumes virtually no water during production. Check with your local municipality to see if a recycling site exists near you.

High Impact Polystyrene – HIPS has excellent cut resistance and can handle very heavy applications such as complete meals. Although not as light as foamed PS, HIPS is still lighter than most other materials making it a very economical choice for a wide range of applications.

PET – Polyethylene terephthalate or PET is a clear, solid plastic material most often used in water and soda bottles. At Genpak, we specialize in two types of PET. APET is a crystal clear material and is an excellent choice when displaying food items. APET may also be used in cold and frozen food applications as well, and will hold up in automated fill/seal processes. CPET is another form of PET that when crystallized becomes able to withstand very high temperatures making it perfect for oven ready applications. We offer a wide range of oven ready bakery and food trays in this material. Both APET and CPET are a #1 recyclable material and at Genpak, we manufacture all of our APET items with up to 30% Post-Consumer Recycled Content.

	-20°F	0°F	50°F	100°F	150°F	200°F	250°F	300°F	350°F	400°F
APET	-15°F				120°F					
CPET	-15°F									
PolyPro	-0°F					210°F				
Polystyrene	-0°F				150°F					
HIPS	-0°F					180°F				
OPS		20°F				180°F				
Harvest Fiber	-0°F					210°F				
Harvest Pro	-0°F					210°F				

These guidelines are to assist you in determining the proper use of Genpak products. They are based upon testing and published data and are reliable in most applications. However, because every food supplier's recipes, ingredients, processes and supply chains are unique, this information is not a substitute for product testing. Confirmation of product acceptability under your specific conditions of use must be done by you.

Polypropylene – When microwave safe options are required for food packaging, polypropylene is the best choice of materials. We use a very unique "textured" PP material to make our products up to 20% lighter than most other competitive items. This translates into much less raw materials being used and lower product cost to you. All Genpak polypropylene items are ♻️ curbside recyclable.

Harvest Pro – This hybrid material is produced from 60% polypropylene and 40% natural minerals. Harvest Pro products have the look and feel of traditional top-of-the-line materials and are microwave safe giving them a wide range of food packaging applications.

Harvest Paper – Our paper cone, portion and drink cups are produced from raw materials originating from forests managed with Sustainable Forestry Practices.

Harvest Fiber – Our fiber material is manufactured from annually renewable resources and is 100% BPI certified compostable. Harvest Fiber products are grease/water resistant. Each item is engineered with ease of use in mind. Features such as our famous Snap-It® style closure and convenient stacking rims will keep customers coming back for more.

Responsible, Renewable & Reliable

Harvest[®] Fiber products are all natural and made from annually renewable resources. Each item is BPI certified compostable.

Features & Benefits

- GMO free
- 100% natural
- Stacking rims on hinged containers
- Genpak Snap-It[®] closures and designs

Harvest[®] Paper

Responsible, Renewable & Reliable

Harvest[®] Paper products are all natural, compostable and made from annually renewable resources.

Features & Benefits

- Tightly rolled rims increase cup rigidity
- Convex base keeps portion cup upright
- Caddy packs available on select cone cups
- Multi-color printing on cone water cups

Clear Deli & Bakery Hinged Containers

Superior clarity with the new A8801 & AS8802. Great for deli and foodservice applications. Check them out on page 34.

The clear lid helps with order accuracy every time. Your customers will appreciate the convenience of curb-side recyclability.

Features & Benefits

- Antifog lids for superior product visualization
 - Close-off sizes available
- Premium look that a black container offers
 - Microwave safe
- Convenience of a hinged container
 - Ability to vent the lid if needed
 - Stackable

ProView[®]

Check out the variety of ProView containers on page 7.

Supermarket Containers

Crystal clear supermarket containers hold everything from candy and nuts to side salads. The wide diameter makes them great for dipping.

Features & Benefits

- Made with PET & 30% post-consumer material
- #1 Recyclable
- One lid fits all sizes
- Accepts heat seal films & tamper evident bands
- Freezer safe
- Superior clarity

SMART-SET[®] Pro

Reduce. Reuse. Recycle.

Check out the full line on pages 7 & 8.

Oven Ready Baking Trays & Lids

Plastic bakery trays and pans have the ability to go from the oven all the way home!

Features & Benefits

- Produced from #1 recyclable material
- The widest selection of stock configurations available
- Superior results in automated fill, freeze & bake equipment
- Crystal clear post-bake lids available
(See page 32 for use and handling instructions)

Use & Handling Instructions.

Genpak oven ready PET containers are engineered and manufactured to withstand rigorous manual and automated processes. Although it is impossible for us to foresee every application, below are several use and handling instructions that we strongly recommend you follow no matter the application. The following tips apply to consumers and processors.

Use Instructions for PET Oven Ready Items

- Safe operating temperature range is -15°F to 400°F.
- Always use a cookie sheet and place the tray on the middle rack of an oven.
 - The cookie sheet ensures an even distribution of heat and the middle rack of an oven is usually closest to the oven thermometer.
- Never use the trays without a cookie sheet or placed too close to the heat source. Melting and damage to the oven could occur.
- A thin layer of spray-on grease may be used for easy release and optimal peaking.
- Allow containers to cool to room temperature before handling without the cookie sheet. Containers will regain their strength at ambient temperature.
- If lids are being used:
 - Wait until the finished product has cooled to room temperature before applying the lid.
 - Apply the lid by placing it in position and then pinch around the perimeter area where the lid meets the tray. Never press down on the top of the lid. This could cause damage to the lid and may not secure lid entirely around the tray.
- Processors – typically bake times are reduced using CPET trays versus some permanent pans.
- Consumers – always follow the cooking/baking instructions printed on the label and always remove the clear lid prior to heating.

Ask us for samples so you may test bake times and temperatures for your application.

Handling & Shipping Instructions for clear PET and Oven Ready Items

- PET items may be frozen to -15°F. The following care must be taken to ensure product integrity.
- At -15°F any item must be handled as if it were glass.
- Label finished goods corrugate as “Fragile” and “Handle With Care”. Items may break if dropped in a frozen state.
- Always stack finished product upright in a case.
- Never over-stack finished product. Use of corrugated dividers is highly recommended when stacking frozen product in a case.
- Use proper sized corrugated when packaging finished product. Too much head-space or side-space can cause items to shift during transport and break.

Genpak recommends that all these tips are followed to help ensure safe use. If you have any questions, please contact your local representative or us directly at ***info@genpak.com***.
